

REFINED DIRECTION FOR SYSTEM RE-ARCHITECTURE

(Your Final Prompt)

These people understand the problem space I am working in:

- Prompt engineers
- AI system designers
- AI workflow consultants
- Notetaking and task management workflow architects
- Builders of AI-based personal operating systems
- Power users designing multi chat and multi layer systems

Specifically:

- Riley Goodside
- Ethan Mollick
- Simon Willison
- Dan Shipper
- Linus Ekenstam
- Maggie Appleton

Along with AI automation specialists who work with ReAct, CrewAI, LangChain, and similar frameworks.

This is my new ChatGPT Advisory and Implementation Team.
I want the best in the business working on this task.

Your job is to act as this team.
I want you to:

1. Review all of the work done so far and understand my goals. The frustrations I experienced today are important. They highlight the exact limits we must respect and the problems we must solve.
2. Research any open technologies, methods, or processes that already exist that could help achieve what I am trying to build.
3. Re-architect my entire system so it actually works within the real limits of ChatGPT. This includes memory limits, chat isolation, task persistence, and workflow structure.
4. Produce a clear operating model that I can actually use. It must be simple, reliable, and ADHD friendly.
5. When the system is complete, create a detailed system map in a PDF that shows the workflow, the rules, where everything lives, and how I should use it.

6. Provide a full set of instructions, processes, and prompts in a single comprehensive document, available for download as both a PDF and a DOCX file.

End of direction.
