

System Infrastructure – Stu.V2-026

Purpose

This document defines the architecture behind the Life Systems engine. It explains how inputs become tasks, how information is routed, where it is stored, and how the system maintains momentum.

Sections

1. Inputs
2. Processing Engine
3. Routing Logic
4. Storage Locations
5. Outputs
6. Review Cycles
7. Infrastructure Principles
8. System Flow Overview

Note

This document works together with the master Life Systems prompt. The master prompt references this document directly.
